

## Gun Club Update

Work has finally begun on the dam improvements. The water level will be lowered about 3 feet during the project. Public use may continue during the construction period but not in the construction area. The dam will be cleared, smoothed, and raised about 2 feet. The principal spillway pipe will be replaced and the sod emergency spillway will be widened. The improvements will bring the dam and the lake into compliance with ODNR's Dam Safety guidance. The work is expected to take 6 weeks.
